

# New mixer introduced by Haarup

Haarup now in addition to the already extensive product range of mixers offer a 6000 litre Haarup counterflow mixer.

The 6000 litre Haarup counterflow mixer is suitable for for instance production of ready-mix concrete. The bottleneck in big ready-mix productions is often the mixing time. The 6000 litre Haarup counterflow mixer with an output of 4 m<sup>3</sup> high quality concrete can load a concrete lorry with only 2 mixes which means that the reduced waiting time for each concrete lorry is utilized efficiently when transporting concrete to the end customer.

#### Hard-wearing construction

The mixer is designed in a hard-wearing construction with for instance a strong planetary gear and a hydraulic coupling. The 6000 litre Haarup counterflow mixer is dimensioned with a huge 4.2 metre mixing pan and is equipped with not less than 10 mixing arms which ensure that the quality of the mix is the same as for all other Haarup mixers. The new Haarup mixer is also available in a special

6750 litre version, which is equipped with a strong 180 kW motor for extra demanding tasks. This makes the 6000/6750 litre Haarup counterflow mixer the biggest planetary gear counterflow mixer in the market.

Of course the mixer is supplied with all the same good qualities as the other Haarup mixers, for instance the unique 8 years Haarup warranty.
